

TURTLENE® THE GREEN CREDENTIALS

Can plastic be greener than recycled paper? If it's Turtlene, it can. Turtlene is a polypropylene product, requiring less resources to produce than recycled paper and board. On every count it's a greener choice.

Tree-free

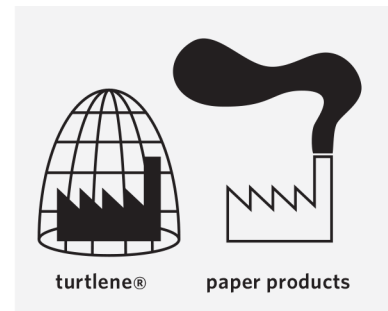

Unlike paper products, not a single tree is consumed to make Turtlene.

9000% less water

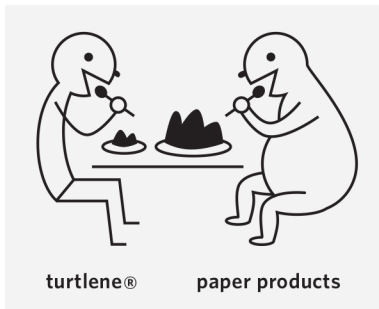

Producing Turtlene uses 9000% less water than new or recycled paper or board.

Traps CO2

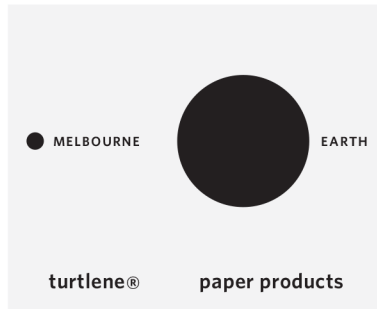

Turtlene is made from propylene gas, a by-product of oil refining that would otherwise be burned off, releasing CO2.

Consumes three times less

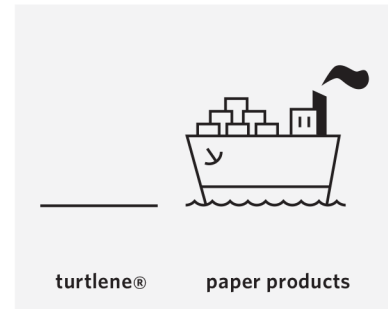

Turtlene requires three times less energy to recycle than paper.

Locally sourced and made

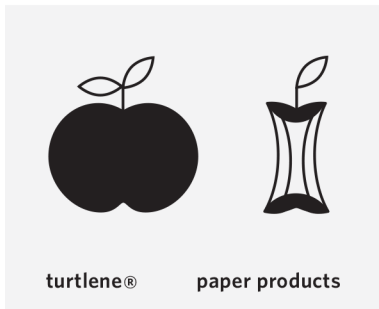

Turtlene is made locally, helping to reduce its environmental footprint by keeping transport to a minimum.

Shipped flat

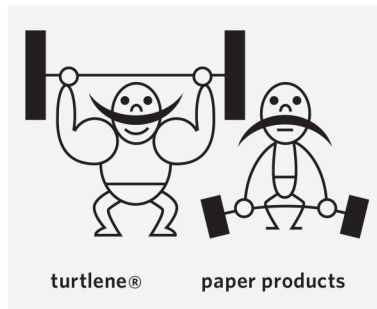

Turtlene products are shipped flat from local sources, further reducing the environmental impact of transport.

100% recyclable

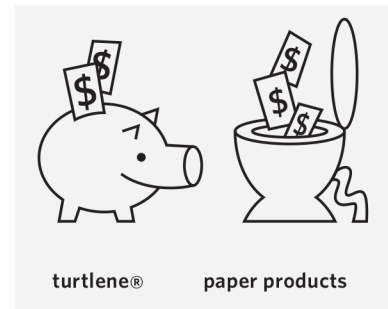

Turtlene is 100% recyclable, while recycled paper products require a percentage of new material and have more waste.

Stronger and more durable

Turtlene is made locally, helping to reduce its environmental footprint by keeping transport to a minimum.

100% Australian-owned

Choosing Turtlene supports local jobs and guarantees you a product with strong environmental credentials.
